

Novel Imaging and Biofluid Biomarkers of Small Vessel Cerebrovascular Disease

Join our study to help advance the future of brain health research.

What is our study about?

The aim of this study is to collect a large amount of information from tests of brain function and cognitive performance over a period of time to help researchers learn more about and develop new diagnostic tools for cerebrovascular disease. We hope to learn about factors that might increase the risk of developing cognitive decline and functional loss.

Is this study right for me?

You may be eligible to participate in this study if you meet the following criteria:

- Age 60-90 years
- Diagnosis of one of the following:
 - Normal cognition with vascular risk
 - Subjective cognitive decline
 - Mild cognitive impairment
 - Mild dementia

What will happen if I choose to participate in this study?

Should you meet the criteria and choose to participate, you will be asked to provide a biological sample, medical records, and family history information. You will also undergo a brain MRI scan and receive cognitive and neurological testing.

What are the benefits of participating?

You will receive a no-cost health examination and \$100 compensation for each study visit.

How long will I be in this study?

We expect that you will be in this research study for up to 5 years. We will contact you for in-person research visits every year.

Where will the study visits take place?

The visits will take place at UCLA.

Where can I find more information?

You can visit our website at:
<https://markvcid.partners.org/>

Interested in participating?

If you're interested in joining our study please contact our study coordinator, Marissa Thirion.
